

Guna-Collagen (Collagen D6)

vials / ampoules

Aesthetic Medicine

Description

Guna Collagen (Collagen D6) is obtained from animal collagen diluted and dinamized 6 times according to the decimal scale 1:10.

In accordance with the observations of the father and founder of Homotoxicology, Dr. H. H. Reckeweg, "Organotherapy" with homeopathized organ preparations is based on the use of pigs or rabbits as donors because the chemical and biological structure of this species shares many common characteristics with the human body.

From a homeopathic point of view, we can confirm that a pig or rabbit organ or homeopathized pig or rabbit tissue is extremely similar to the human homologous organ and as a result of this similarity (greater than that of other animal species such as cattle), the therapeutic efficacy of a homeopathized preparation is even greater.

This likeness is particularly apparent at immunological level and, as is well-known, at anatomical level.

The result is the marked organotropism of the "Suis" or "Rabbit" protein for the human homologous protein.

Due to pigs' and rabbit's almost completely ineffective detoxification systems, their tissues and, therefore, their proteins are particularly toxic as they absorb toxins (Steatosis degeneration).

One, therefore, creates a protein structure that has the potential characteristics of a nosode, plus the specific properties of organotropism.

An organotherapeutic homeopathic preparation is an organ-specific nosode, that, via a subliminal immunological mechanism, triggers the immune response of not only the entire RES system (hystiocytic macrophagic), but also of the target organ or tissue. We can confirm that the use of organotherapies in treatment causes a localized "microinflammation", which although, of course, not clinical (because of the dilution), is sufficient to "waken" the functionality of the connective matrix.

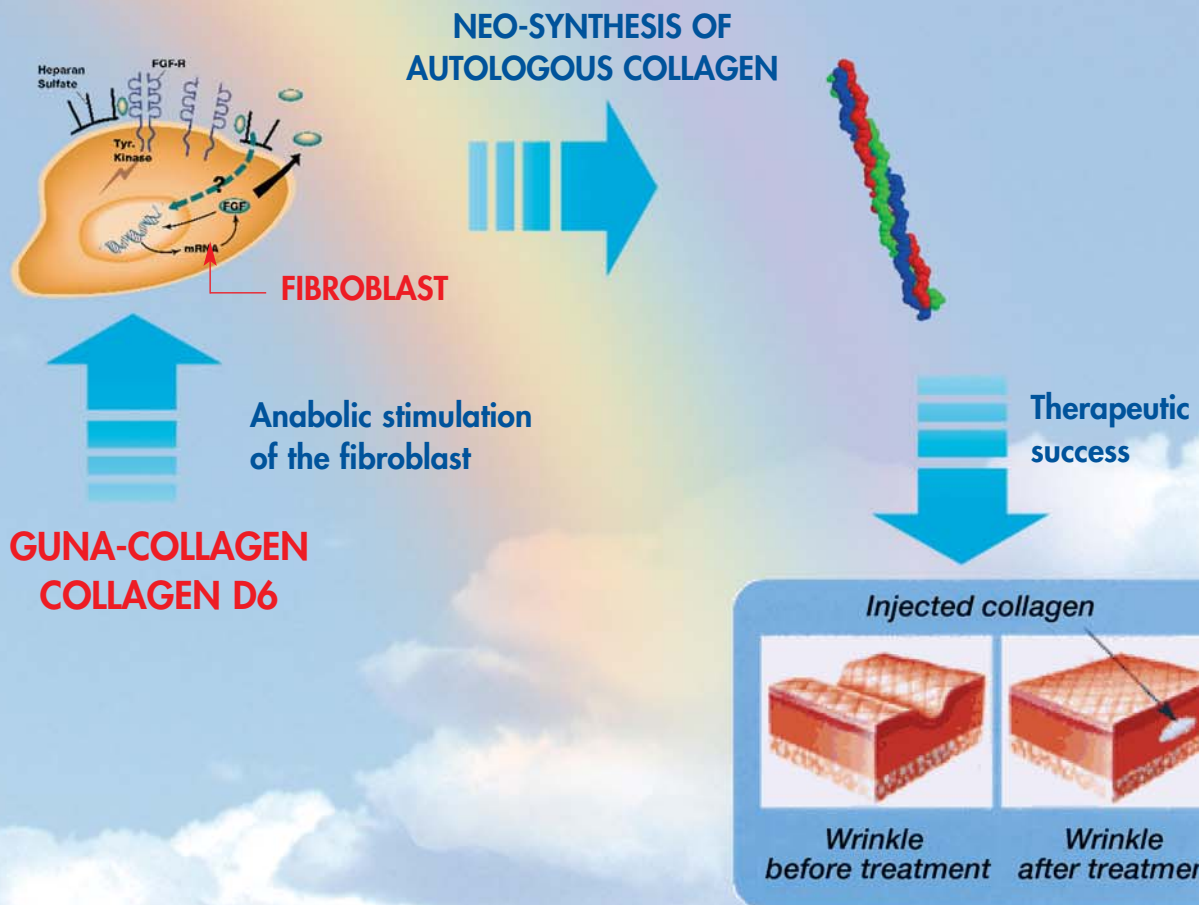

Their action is also partly "trophic": these proteins, or some substances contained in them, are substrates for the enzyme reactions of protein synthesis ("codifying matrices"). The fact that they are diluted in accordance with the laws of enzyme kinetics, makes them perform as inductors, speeding up protein synthesis.

The dual mechanism of the action of the organotherapies can also be identified in the organ derivatives contained in GUNA-COLLAGEN (COLLAGEN D6).

On the one hand, GUNA-COLLAGEN (COLLAGEN D6) triggers, with the immunological mechanism, the function of the loose fibrillar connective tissue of the dermis via a sub-clinical inflammatory type process, on the other hand, it also carries out a trophic action by stimulating the fibroblast to increate autologous collagen.

Therefore, we cannot refer to GUNA-COLLAGEN (COLLAGEN D6) simply as having a supplementation, and, therefore plastic action, but real biostimulation.

Guna-Collagen (Collagen D6®)

Uses

For face and neck wrinkles. Skin tone improvement. Anti-aging effect. Stimulation of connective tissue metabolism.

Ingredients

Collagen 6DH

Inactive ingredient:

Sterile isotonic sodium chloride solution

Package size

Box of 10 x 2 ml glass vials/ampoules

Box of 50 x 2 ml glass vials/ampoules

Directions

Standard protocol for i.m. injection Skin tone improvement

1 vial/ampoule 1-3 times a week according to severity and clinical evolution.

Standard protocol according to mesotherapy technique Treatment of face and neck wrinkles

Inject 0.3 ml. Use a 4 mm, 30G needle, make the classic intradermal injection according to the mesotherapy technique.

Stimulation of connective tissue metabolism Treatment of face and neck wrinkles according to the tunnelling technique

Inject 0.3 ml. Use a 13 mm, 30G needle, cannulate the wrinkle by moving the needle gently to left and right, while injecting the content of the syringe.

The mesotherapy technique standard protocol consists of one session a week for 8-10 weeks. For prolonged treatments, 2 sessions for the first week, 1 session a week for 1 month and then 1 session a month are recommended. For long-lasting results a maintenance therapy is recommended based on 3-4 sessions once or twice a year.
